Updates

- ▶ Applied QC filters, removing:
 - ▶ 2 intentional duplicates
 - ▶ 4 samples with high genotype missingness

Bristol demographics

Originally $n = 590$ individuals without filters. Two were duplicated intentionally, so $n = 588$ are unique. 4 samples did not pass quality controls, finally leaving $n = 584$ for analysis.

Sex	Count	%
Male	348	59.6
Female	236	40.4

Diagnosis	Count	%
SSNS	347	59.4
SRNS	170	29.1
NS unclassified	67	11.5

Race/Ethnicity	Count	%
White	399	68.3
Asian	83	14.2
Unknown	71	12.2
